Understanding the Modbus protocol and how to work with it

ASC Trainer

A comprehensive course designed to introduce the concepts of the MODBUS protocol. The morning session is devoted to classroom study and lecture, complete with a question and answer period. We provide a catered lunch, then after the break it's on to the "Hands-On" labs.

The course will guide you through the basics, explain the standard communication connections. The course material is presented such that the principals and techniques will apply across most all manufactured MODBUS products.

The first part of the day is dedicated to understanding the digital aspect of  the protocol. We'll teach you the different numbering systems used and how to decipher the data stream. You will learn how to interpret individual device status.

After the lunch break, we dive into the labs. In this segment we include some planted bugs and errors! You'll learn how to identify and resolve them.
